

EZ-POUR

To Our Valued Customer,

You all spoke and we listened. At EZ-POUR we strive to sell the highest quality product and we are constantly working on improvements. We always like to hear what is working and what is not working from our customers. After listening to suggestions from customers like you, we set out to make a better gasket. We are very proud to announce that we have developed a **NEW GASKET MATERIAL WITH A GASKET RETAINER RING.**

We want all of our customers to have the best we have to offer. Please see the below instructions on how to correctly install the gaskets to the spout.

1. Make sure your "flame arrestor" (screen) is installed, push it into the base of the spout, it has a lip on it that allows the gasket to seal.
2. When installing the gasket, there are two sides to the gasket. First the gasket has a groove in which the flange of the spout fits, the upside or spout end of the gasket is shorter than the side that seals against the can.
3. Install retainer ring by sliding it over the tip end of the spout, with the cup toward the gasket, the retainer ring should then go over the gasket holding it from expanding.
